

JAWS pdf server® v4.0.2

Jaws PDF Server is a software solution for standardized PDF file creation and optimization across the enterprise. The software allows users to quickly, easily, and cost-effectively create PDF files, which are now the de-facto standard for corporate file sharing.

Jaws PDF Server has a powerful and intuitive drag-and-drop workflow management interface that allows administrators to easily specify and automatically manage the PDF workflow.

Users on Microsoft® Windows®, Mac® and Unix® workstations can drag-and-drop PostScript® language, Encapsulated

PostScript (EPS) and TIFF™ files onto hot folders for conversion to optimized PDF files. Jaws PDF Server also provides print drivers that are installed as part of the product across a network which allow users to create optimized PDF files from within almost any application.

For Windows clients, toolbar icons install in Microsoft Word and PowerPoint, allowing the user to create structured PDF files containing bookmarks and other document structures.

Simple yet scalable

Import and export workflow capabilities provide simple multi-server installations and back up capabilities.

PDF files optimized by proven Global Graphics technology

Provides full administrative control over PDF configuration settings using the latest Jaws PDF creation Module from Global Graphics Software.

PDF Creation for the Enterprise

Jaws PDF Server is designed for enterprise use platforms including Windows 2003 Server running Citrix Metaframe. Jaws PDF Server can be used to create PDF files from Windows, Mac and even Unix workstations.

Easy workflow management

A drag-and-drop graphical interface for administrators simplifies configuration and workflow administration.

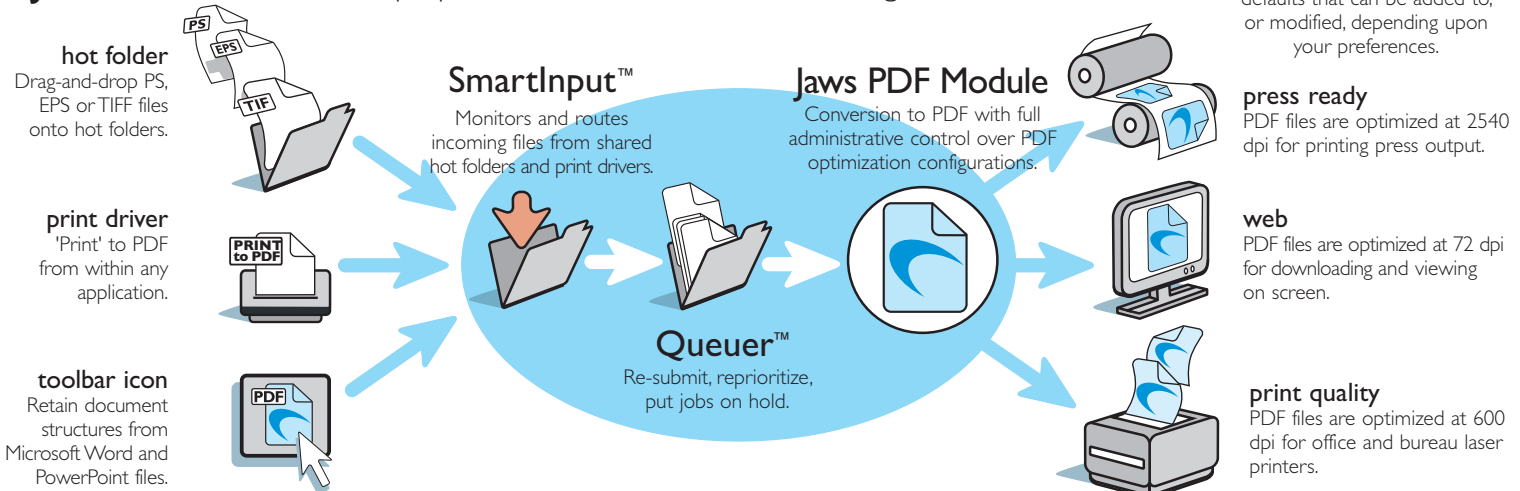

Enhanced integration with Microsoft Office for Windows

A toolbar icon installs in the user's Microsoft Word and PowerPoint applications and can be used to retain document structures such as bookmarks and hyperlinks from the original document. These tools become very important for navigating and repurposing PDF files, especially when they are used within Document Management Systems.

Pedigree in PDF

Global Graphics has been developing and refining PDF creation tools from the inception of the PDF format in 1993. An expert developing technology for page description languages, including PostScript® and XPS (Microsoft's new XML based document technology), the Company continues to implement the latest features and solutions around the open format PDF Specification. Jaws PDF products are based on a robust, mature and high-quality PDF engine that is well known and respected in the industry.

Jaws PDF Server Multi-purpose PDF creation for an entire organization.

Features

Jaws PDF Server consists of three modules that work together seamlessly to automate and optimize PDF file conversion: **SmartInput** and **Queuer** control the input and output paths for your files, while the **Jaws PDF Module** creates the optimized PDF files.

SmartInput

SmartInput is the gateway through which jobs enter the workflow. It continuously monitors hot folders on the network for files dropped there by end-users, or files put there by print drivers in a process driven by end-user workflow processes. As a result, users are free to perform other tasks instead of waiting for system resources to become available.

SmartInput uses hot folders, providing a convenient way to process PostScript or individual TIFF and EPS graphic elements. Additionally SmartInput allows virtual printers to be seen across a network allowing users to 'print to PDF'.

Queuer

Jaws PDF Server includes full automation of input and output queues. The Queuer provides full administrator control of jobs coming into a PDF-creation workflow, including requeuing, reprioritizing, placing jobs on hold, searching for unfinished or finished jobs, and previewing jobs.

The Queuer also delivers jobs to multiple output locations simultaneously. It

continuously reviews the status of various devices and instantly sends files as soon as the previous job has been completed.

Jaws PDF Module

The Jaws PDF Module consumes EPS, TIFF and PostScript and produces PDF files. The module is located in the workflow after a SmartInput or Queuer module. The PDF files generated by the module can be made available to other systems, or other steps in your workflow, via another Queuer module.

The PDF files produced by the Jaws PDF creation Module are fully compliant with the PDF 1.5 specification. Features such as 128-bit encryption and fast web view are supported. Administrators are able to customize PDF configuration settings allowing companies to promote the use of corporate standards.

This server-based PDF creation module is multi-threaded whereby it can produce PDF files optimized for different PDF configuration settings simultaneously – such as print quality, web and press ready optimizations.

Recommended System Configuration

Server platforms:

Windows 2000 Server; 2003 Server; XP
 Windows 2003 Server running Terminal Services
 Windows 2000 Server; Windows 2003 Server running Citrix
 Metaframe Presentation Server 3.0

Client platforms:

Windows 2000, XP,
 Mac OS9.22 and OS X (10.35 or higher)
 Linux

JAWS PDF DESKTOP SUITE™ v1.0

Jaws PDF Desktop Suite provides high quality PDF creation, manipulation, annotation, merge and forms functionality in one convenient, affordable software package. With Jaws PDF Desktop Suite you get the highly acclaimed Jaws PDF Creator® and Jaws PDF Editor® software in a single installer.

Businesses can increase productivity and improve internal and external collaboration and communication using Jaws PDF Desktop Suite. Easily create high quality PDF files. Accelerate review cycles

by using powerful commenting tools such as sticky notes, a highlight pen, underline and strikethrough. Easily format and assemble PDF files by inserting, extracting, rotating, and deleting pages. Document navigation can be enhanced through bookmark creation and formatting tools.

Whether you're a single user, small office or corporation, Jaws PDF Desktop Suite offers a user-friendly, affordable solution for PDF creation, assembly and collaboration.

PDF Creation made easy!

Easily create and configure PDF files:

- 'Print' to a PDF file directly from any application.
- One-click PDF creation from Microsoft® Word, Excel and PowerPoint allowing users to easily create 'intelligent' PDF files.
- Use optimized PDF configuration settings or create your own

View, navigate and print PDF files

Open, navigate and print PDF files using Jaws PDF Editor. View and create 40-bit and 128-bit encrypted files. Navigate via bookmarks, the page list, thumbnails, or links. Search for words or phrases in the file.

Review and mark-up with comments

Create, edit, save and import and export comments directly in a PDF file. Mark-up tools

include Note, Highlight, Strikethrough, and Underline each with an associated pop-up comment window to add additional information.

Additionally, share comments among other reviewers using import and export comments.

Assemble PDF files

Document assembly tools include Insert, Delete, Reorder, Rotate, and Extract pages. File Open settings determine how the document displays when opened. Add, delete, format and rearrange bookmarks to enhance navigation. The Finish Document Wizard steps through a checklist of settings to prepare the file for distribution.

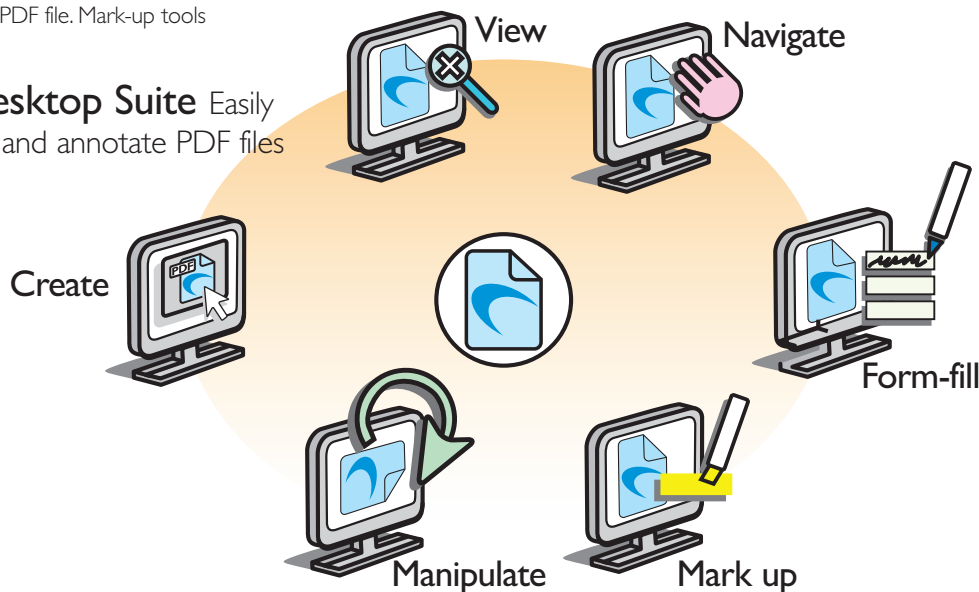

Work with PDF forms

Fill out a PDF form, edit, save, print, e-mail and import and export field data once you've finished.
